What's New

The following table details the new features and functionality included in this release.

ID	NetSuite	New Feature Release Note
CHM-6585		A new "Display multiple fields with same label in separate rows" setting is now available on the List and Cart Configuration administrative screen. This setting allows you to customize the display of full view item information exported from a list or from the cart. Select this check box to specify that multiple fields with the same label (for example, several Subject fields associated with a single item) are listed on separate rows in the output file.

Fixed Issues

The following table details the fixed issues for this release.

ID	NetSuite	Fixed Issue Description
CHM-6451	642678	The Birth Date field on Chamo's patron registration screen allowed a patron to enter a birth date that did not comply with the valid date format specified in the Input Date Format administrative setting. In version 3.3 SP2, Chamo now displays an error message if a patron types an invalid date in the Birth Date field. As part of this change, the Register screen has also been improved to make it easier for patrons to select a birth date using the date picker element in the user interface.
CHM-6596	724457	HKPL only: A problem occurred when you added an item to a lamination of library materials (LOLM) or withdrawal saved list. Instead of replacing the current item status with the saved list status, Virtua would retain the old status, and there would be two statuses associated with the item. This is fixed. When you add an item to an LOLM or withdrawal saved list, Virtua replaces the item status with the saved list status.
CHM-6323		HKPL only: A problem sometimes occurred when a Billed Lost/Damaged Replacement Fee was assessed as part of the withdrawal saved list workflow. When a patron paid the Billed Lost/Damaged Replacement Fee in full, Virtua failed to remove the billed item from the Billed page on the Activity tab of the Patron Information window. This is fixed.
