Release Notes

Version 3.2 SP1

December 2017

*These release notes cover the following
Chamo product versions:*

Product	**Versions**
Chamo	3.2 SP1

innovative

Chamo

ID	Netsuite (or TSR)	Class	Release Note
CHM-6296	596838	Story	As of Chamo 3.2 SP1, a new "Do not send username in patron registration email" is available on the Patron Registration Configuration administrative screen. When this check box is selected, Chamo does not include the username of the new patron in the patron registration email. By default, this setting is not selected.
CHM-6119		Story	It is now possible to schedule any Chamo index to be re-indexed at a future date and time. This allows you to re-index during your library's off hours with no need for manual intervention. To schedule an index to be automatically re-indexed, enter a date and time in the Scheduled Date box on the Indexing Control administrative screen and click the Save button. Use the format **YYYY-MM-DD HH:MM:SS** to specify the date.
CHM-4442	25446 (TSR)	Story	As of version 3.2 SP1, Chamo now includes a **searchWidget.html** file in the **/WEB-INF/searchWidget** directory of your Chamo installation. The code found in this file makes it easy for you to add a Chamo search widget to your library's web page. Patrons can enter a term in the search widget text box and hit Enter to execute a search in Chamo. Note that the **searchWidget.html** file is re-generated when Chamo is started, and when an administrative user saves the General Configuration Settings screen. If your library's Chamo Base URL changes, or if the Base URL for Secure (HTTPS) Pages changes, you must update the search widget code to reflect the contents of the new **searchWidget.html** file.
CHM-6188		Story	A new REST web service (**GET /patrons/{id}/checkoutsWithRenewable**) allows you to retrieve the renewable status (true or false) of each item checked out to a given patron. A checkRenewals parameter is associated with the web service. If checkRenewals is set to true, then a transaction location must also be provided. If checkRenewals is set to false (or if no value is provided), the renewable status is not checked and the web service returns values of false for each checked out item. See the Swagger user interface for more information. To view the Swagger interface, add '/rest' to your Chamo base URL (i.e., http://unferth.iii.com:8900/rest/) .

ID	Netsuite (or TSR)	Class	Release Note
CHM-6141		Story	HKPL only: In version 3.2 SP1, Chamo's HanWeb support has been improved to make it easier for users to change languages in the Chamo interface. When HanWeb is enabled (via settings on the External Data Configuration administrative screen), a patron user who is logged in to Chamo now sees both the Chamo language selection drop-down list and the Simplified Chinese link. When a patron clicks on the Simplified Chinese link, Chamo warns the user that proceeding will result in Chamo closing the current patron session. If the user chooses to continue, Chamo closes the session and routes the user to a HanWeb interface that displays a translation of the Chamo screen in Simplified Chinese.
CHM-4363	24318 (TSR)	Story	Chamo sometimes logged unnecessary error messages ("ERROR [tomcat-exec-5] RequestGroupStrategyImpl.getRequestGroup(43) | A copy must be specified for a request of this level and type") in the catalina.out log file. This is fixed in Chamo 3.2 SP1. Chamo now only logs such error messages when the software is being run in DEBUG logging mode.
CHM-6181		Bug	A problem occurred when you performed a search and then added an additional search term via the Additional Terms feature in the "Refine your search" panel on the Search Results screen. If you then attempted to remove the additional search term by clicking the red X beside the term near the top of the screen, Chamo failed to remove the search term. This is fixed in Chamo 3.2 SP1.
CHM-6184		Bug	A problem sometimes occurred when you attempted to submit a purchase request without entering data in the E-mail Address field on the Request For Purchase screen. When you clicked the Submit button, Chamo would display a message and prompt you to provide an e-mail address, even when the E-mail Address field was configured to be optional via settings in the Chamo administrative interface. This is fixed in Chamo 3.2 SP1.
CHM-4960	350485	Bug	A problem sometimes occurred when you viewed the Item Details screen for a serials record. Chamo sometimes displayed the MARC tab on this screen by default, even when the "Default to Issues tab for serials" setting was enabled on the OPAC Settings administrative screen. This is fixed in Chamo 3.2 SP1. The software now correctly respects the "Default to Issues tab for serials" setting when displaying the Item Details screen.
CHM-6240	590573	Bug	An error sometimes occurred when you performed a search and then attempted to view the Item Details screen for an item returned in the search results. The problem occurred when the item's bibliographic record 245 tag subfield $a contained more than 400 characters. This is fixed in Chamo 3.2 SP1.

ID	Netsuite (or TSR)	Class	Release Note
CHM-6149		Bug	If you performed an advanced search and then navigated back to the Advanced Search screen and clicked the Reset button, Chamo failed to clear the search terms used in your previous search. This is fixed in Chamo 3.2 SP1.
